13. ✓ Other: See the attached Notice of References Cited (P			· · ·	
		•		

Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments are not persuasive.

Applicant has failed to distinguish the JATO script contained within a class from the claimed method. In the context of object-oriented programming, methods specify the way in which operations are encoded in software (see James Martin, "Principles of Object-Oriented Analysis and Design," p. 19, cited with this action). This ordinary definition of methods does not require a specific syntax that would preclude the interpretation that the JATO script, stored as a static string, is a method. Further, Applicant's claims, as they are presently written, do not require that the method be inherited from the base class as Applicant argues. Finally, the transformation described at the top of p. 8 of the JATO-One reference does act on the given instance, as the transform method is called with no parameters, implying that it acts on information stored within the object (jtox).
